Report Outline

The report entitled **“WHERE WE ARE HEADING: Clean & Green Future of Energy”** provides key insights and examines the current status of the most promising market segment for investment to come in the last two decades; Clean Energy. The emphasis of the report is on energy projects and technologies possessing unique competitive advantages that are market-deployable “here and now”. Globally, across industries there is a need for de-leveraging, capital infusion, business restructuring, and a shift to an “Asset Optimization-Divestment” model. These needs will be covered in-depth, as well as specific coverage of how the energy industry will be transformed in the next decade as policymakers, investors, and developers focus on Clean Energy.

Our aim is to provide accurate, relevant information and data, market trends, and highlights to investors, investment management firms, business executives, policymakers and other key stakeholders.

This report will begin with an overview (“big picture”) of the clean energy market and will then move into particular segments. Specific topics covered include: advanced commercial market technologies, waste energy recovery, renewable / alternate energy sources such as wind, solar, hydro and other important areas such as combined heat & power (CHP). Also, business trends in carbon emissions / markets, cap & trade are covered along with CO₂ based enhanced hydrocarbon recovery being discussed.

Several possible future scenarios will be examined and the economic ramifications of each. The scope of discussion will span from the global perspective right down to the individual energy consumer level.

Ultimately, this report provides a roadmap to the process of re-engineering the energy industry with emphasis on enhancing value of assets under management (AUM) and increasing return on investment (ROI).

The report is organized into a crisp format with charts, tables, facts, and figures along with adequate reference materials.
